

TRITEC™ Pre-Cut

Contact Layer Dressings

Featuring AFM® Technology

Every Milliken TRITEC Pre-Cut and TRITEC Silver Pre-Cut dressing utilizes Active Fluid Management® Technology created by Milliken Healthcare Products, LLC. This three-part design combines two layers of high-performance fabric using a micro-knit process, creating a moisture transfer mechanism that pulls away and traps excess exudate. The combination of these fabrics keeps the wound bed moist, the periwound skin healthy, and harmful exudate away from a healing wound.

TRITEC Pre-Cut and TRITEC Silver Pre-Cut provides full coverage for peristomal skin while being comfortable and conformable to the patient. The pre-cut was designed for use around various sizes of tubing and fixtures with no need to be cut.

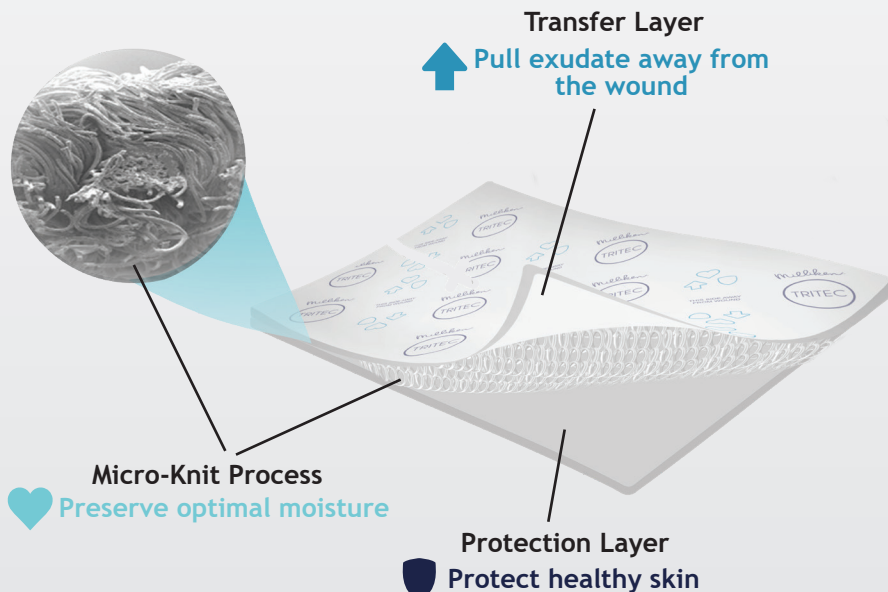

TRITEC Silver combines the moisture management benefits of AFM Technology's three-part design with a proprietary ceramic silver ion technology. This powerful, controlled release of ionic silver inhibits a broad spectrum of infection-causing microbes including antibiotic-resistant strains such as MRSA. The release of silver into the dressing is activated by the body's own sodium and begins inactivating pathogens within 24 hours of dressing application. Antimicrobial activity is indicated for up to seven days.

INDICATIONS FOR USE

- Partial thickness burns
- Incisions
- Skin grafts
- Donor sites
- Lacerations
- Abrasions
- Stage I-IV dermal ulcers (vascular, venous, pressure and diabetic)

BENEFITS

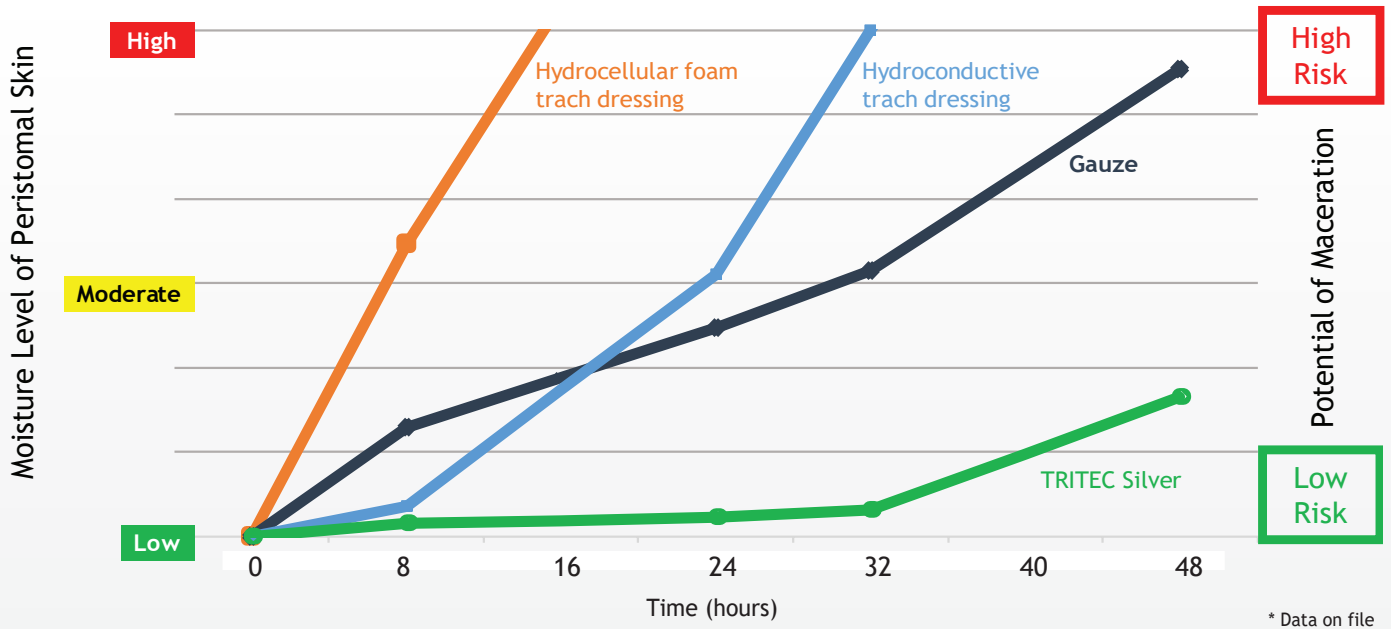

- Removes excess exudate through Active Fluid Management Technology
- Minimizes risk of maceration
- Protects healthy, intact skin
- Allows for fewer dressing changes
- Improves patient comfort through conformability

Milliken™

MILLIKEN HEALTHCARE PRODUCTS, LLC

In lab testing, dressings with Active Fluid Management technology consistently protect the peristomal skin from excess moisture better than all the competitive dressings tested.
